

# Obstetric Hemorrhage Virtual Reality

Clinicians in Obstetrics need to be able to identify and manage a patient experiencing an obstetric hemorrhage. Co-developed with NYCH+H, this simulation allows learners to practice identifying and managing the 3 stages of an obstetric hemorrhage and can be configured to your institution's policies and procedures (within ACOG and CMQCC's practice guidelines), in a risk-free environment.

## Learning Objectives

- ◆ Demonstrate effective communication with a patient and their family
- ◆ Demonstrate effective teamwork and communication
- ◆ Demonstrate timely and accurate interventions
- ◆ Obstetric Hemorrhage takes as little as 18 minutes to complete
- ◆ Your obstetric clinicians and providers are learning critical obstetric hemorrhage skills in a highly immersive environment, while you save time and resources

## Capabilities

- ◆ Models a patient experiencing obstetric hemorrhage in realistic birthing and operating room environments
- ◆ Users practice identifying and managing the 3 stages of an obstetric hemorrhage within ACOG and CMQCC's practice guidelines. The managements are configurable to your own clinical setting's protocols within the guardrails of the ACOG and CMQCC guidelines
- ◆ Simulation takes less than 20 minutes to complete
- ◆ Provides a virtual, zero-risk, environment to practice and learn critical obstetric hemorrhage management skills
- ◆ Provides learners a readiness score, determined by assessing core competencies throughout the simulation
- ◆ Health Scholars' patent-pending voice technology.
- ◆ VR simulation can offer learner 24/7 accessibility which allows for more frequent, independent practice
- ◆ Delivers in application debriefs to reinforce key learning objectives
